Goal Scorer Valuation
Europe 2010 -11

Players included in the analysis:
Leo Messi
Wayne Rooney
Cristiano Ronaldo
Samuel Eto'o
Robin Van Persie
Carlos Tevez

Methods Used to Analyze Goal Scoring Value:

For this analysis we have tried to identify the goal scorer who creates the most value from each goal scored.   While the number of goals that a player scores is an important number and is useful in assessing that player's worth we wanted to dig a little deeper to understand what sort of impact each goal has and assess the value of each goal scored. By determing the value of each goal we believe we can understand what a player's real worth is by being able to measure what his goals are worth to his team. For instance we want to see if a player who scores 30 goals in a season with most goals typically coming against weaker opponents in weaker competitions is more or less valuable than a player who scores 10 or 15 goals against more difficult teams in more important competitions. In order to do this we have analyzed each goal that the players in our study have scored and have developed a formula to calculate how much each goal is worth based on the following:

1) Opponents position in the table at season end (x)
2) Opponents average goals against per match European rank (y)
3) Level of difficulty of the opponent's league (z)
4) Level of difficulty of the competition the teams are playing in (i.e. Champions league, FA Cup, League) (a)
5) Level of importance of the match being played (i.e. quarter finals, semi finals, championship) (m)
6) Final score of the match and relative difficulty of scoring during match (s)

For (1) each team is given a value between 1.2 and 7.8 based on their final placing in their respective division. So, a team who finished first would receive a value of 7.8 and a team who finished fifth would receive a value of 5.3.
For (2) each team is given a value between 1.5 and 10 based on their goals against/match rank of all of the teams in our study. So, a team who ranked first in goals against/match would receive a value of 10 and a team who finished 50th would receive a value of 6.11.
For (3) each league was given a value depending on the relative level of difficulty. For example the Premier League was given a value of 2.0 while the Bundesliga received a value of 1.6 and La Liga received a value of 1.8.
For (4) each competition was given a ranking based on their value and importance. For league games that value was 1, Champions league 1.3, FA Cup and League Cup 1.1 and UEFA Cup 1.2.
For (5) the level of importance of match was used for Champions league matches to increase the weighting of goals scored during later stages of the competition. So for a goal scored in the Champions league final the player received a weighting of 2.0. For a quarter final goal the weighting was 1.4.
For (6) the final score was taken into consideration to increase the weighting of goals scored in close matches and reduce the weighting of goals scored in "blow outs". So for a game where the score differential was 1 the weighting of a goal was 2.0. For a game where the score differential was 5 each goal was weighted at 0.8.

The formula used to calculate the goal value for each match is as follows: # of goals scored*[(x*z)*(y*z)]*[a*m]*[s]. The sum of each match is then used as the Goal Scorer Value.

Findings:

Using the methodology described above we have identified Leo Messi as the most valuable goal scorer from our selected group of players. Leo Messi had a ranking of 5,068.95 when analyzing his 43 goals scored. The second highest player was Wayne Rooney with a ranking of 3,465.1 when analyzing his 16 goals scored. Although Messi's overall ranking was the highest Rooney's value per goal was actually higher at 216.6/goal compared to Messi at 117.9/goal. Cristiano Ronaldo, who had the most goals scored in our study, ranked third with a value of 3,331.8 at 70.9/goal.

What our study shows is that the number of goals a player scores is much less important than *when* he is scoring them. Ronaldo who scored the most goals in our study ranked only third as he failed to score in many important matches against more difficult opponents. Rooney, who only had 16 goals, was able to score in most of his team's important matches, thus increasing his goal scoring value. Messi, who ranked highest, scored the second most amount of goals behind Ronaldo while also scoring in almost all of his team's most important matches.

The full findings of our study and a breakout of each players goals can be found on the following pages.

Goal Scorer Valuation

Summary

Ranking	Player	Goals Scored	Opponent Rank	Competition Rank	Match Score Rank	Goal Scorer Value	Value Per Goal
1	Leo Messi	43	3	1	3	5,069	118
2	Wayne Rooney	16	2	5	2	3,465	217
3	Cristiano Ronaldo	47	1	2	4	3,332	71
4	Samuel Eto'o	29	5	3	6	2,644	91
5	Robin Van Persie	22	4	6	1	1,816	83
6	Carlos Tevez	24	6	4	5	1,441	60

Opponent Rank is defined as the cumulative difficulty of opponents faced over the 2010-11 season. From our study Cristiano Ronaldo's Real Madrid faced the most difficult group of opponents.

Competition Rank is defined as the cumulative value of the competitions each player participated in. The more difficult and important that competition the higher the value. From our study Leo Messi's Barcelona played in the competitions with the highest values.

Match Score Rank is defined as the measure of score differential throughout the season. The lower the value the "closer the matches that were played. From our study Robin Van Persie's Arsenal played in the closes matches for 2010-11 season.
